## **SILVERRUN Professional & Enterprise Series 2.8.7 Released**

Quebec, QC, Canada – October 2011 - Grandite announced that on October 1, 2011, it released SILVERRUN Professional & Enterprise Series 2.8.7, an important update of its data and business process modeling suite.

“We have added, respectively updated, bi-directional database interfaces for Firebird, Postgres and MySQL. Moreover, SILVERRUN is now more permissive supporting forward and reverse engineering of virtually any database that is ANSI-SQL compatible”, states Axel Troike, President. “With this SILVERRUN release, all major relational databases are supported up to their latest version.”

The SILVERRUN Professional & Enterprise Series covers conceptual, logical and physical data modeling as well as traditional business process modeling. An enhanced range of physical concepts as well as the synchronization of databases and models are supported for major RDBMSs like SQL Server, Oracle, Informix and Teradata. Grandite’s service portfolio for SILVERRUN includes maintenance & support, training classes, consulting and individual development on demand.

“We now focus on the next release which is scheduled for spring 2012”, adds Axel Troike. “SILVERRUN will have new features to link to non-SQL databases.”

For further details about SILVERRUN, please visit <http://www.silverrun.com> or contact us at [info@silverrun.com](mailto:info@silverrun.com) or 1-418-622-4892.
